

GD1062-87 Cleavage Strength Test Fixture**Tests in accordance with ASTM D1062****Cleavage Strength Test Device Requirements**

ASTM D1062 specifies test fixtures for determining the cleavage properties of adhesive bonds of various metals. The GD1062 fixture meets these requirements.

The GD1062 model grips are built to mimic the grips described in ASTM D 1062 for holding a test specimen between a fixed member and a movable member. The grips are of the self-aligning type, and are attached so the fixed and movable members move into alignment as soon as any load is applied. These grips were modeled after a characteristic line model provided in the standard.
